

# Falcon Melts Down the Facts on Sustainability

Falcon takes great care to operate in an environmentally responsible way. Our manufacturing facilities are focused on reducing waste, minimizing our carbon footprint, and using recycled and recyclable materials.

Recycling is an essential part of our business culture. Over the past 30 years our state-of-the-art metal casting foundry has removed engine components from more than 50 million automobiles and recycled them to make table bases. We use FSC hardwoods to produce many of our standard products. Upon customer request we can supply bio foam and recycled materials, such as upholstery fabrics or linoleum, to gain LEED points for any project.
