FL FLAG

Starting At: $1378

Creativity and functionality: Flag offers plenty of options for creating high-impact, dynamic volumetric effects without, undermining the very features of this sound-absorbing panel. By acting as a flag, the Flag panel guarantees to block the volumetric wave, minimizing reverberation and making rooms acoustically comfortable.

Flag is a double-sided sound-absorbing panel, so it is upholstered on both sides. Its versatility means it can be installed on special tracks on walls and/or ceilings, or by using adjustable cables it can be fixed at different heights from the ceiling, thereby giving you the option of creating original and creative solutions.

The Flag panel is available with two types of sound-absorbing material: Flag M with Basotect® melamine resin by Basf® and Flag W with Whisper® material by Stratocell®.
